Brian--

In addition to the time-critical removal action ( basically, construction of the cap pursuant to an Administrative Order on Consent (AOC) with EPA), Respondents (McGinnes Industrial Management Corporation and International Paper Company) are conducting a Remedial Investigation/Feasibility Study (RI/FS) concerning the San Jacinto River Waste Pit Superfund Site pursuant to a Unilateral Administrative Order (UAO). One of the objectives of the RI/FS process is to determine the nature and extent of contamination present at a Superfund Site. Because of your property's location (directly adjacent to the San Jacinto River Waste Pit Superfund Site), additional response activities associated with the RI/FS may at some point in the future need to be conducted on your property. As San Jacinto River Fleet (SJRF) informed EPA during our meeting in Dallas on October 6, 20011, procuring access to the SJRF property can be a lengthy process considering the facility's status as an Office of Homeland Security, secured- facility. To that end, we would like to get the ball rolling should further response activities on your property become necessary under either the AOC or UAO.

Please feel free to give myself or Anne a call with further questions.

Many thanks.

Jessica
